## MATERNAL POSTPARTUM DEPRESSION SCREENING

The percentage of deliveries in which members were screened for clinical depression within 12 weeks of their delivery, and if screened positive, a follow up plan is documented in the medical record.

1. Documented result for postpartum depression screening using a **standardized screening tool** within 12 weeks of the delivery date.
2. The **result** of the postpartum depression screening was on a standard screening tool.
3. For **positive results**, there was documentation of a follow-up plan.
4. All visit notes used to support the measure are dated and include the **SIGNATURE AND CREDENTIALS** of the provider of service.
