

Codes That Require Up-Front Documentation

In order to facilitate more timely claims payment and reduce potential re-work, providers are encouraged to submit supporting documentation along with the original claim when submitting claims that include:

- any unlisted code
- any code submitted with modifier 22
- codes for services that could be considered cosmetic
- codes for services where Medica has a medical policy in effect that requires documentation to show that conditions in the policy have been met. (e.g., codes 64633-64636); the Medica policy “Percutaneous Radiofrequency and Laser Ablation/Denervation Procedures for Facet and Sacroiliac Joints” includes the criteria of failed conservative management, which can only be shown with documentation
- genetic testing services require office notes to show genes tested, the reason for the test and any genetic counseling performed

If the service is provided in a provider office, copies of office notes should be included. For surgical services a copy of the operative report is required.

In addition, the list below contains codes that have been selected for clinical /medical director review and require documentation.

Note: The code list is subject to change without notice and codes may no longer require documentation or review.
